

New Features in DMN 1.2

Where we are, and where we're going

Dr Alan N Fish
Principal Consultant, Decision Solutions

Where we are

Status

- Version 1.2 submission postponed (again)
 - By 6 months
 - Submission deadline now December 2017
 - Assume v1.2 published early in 2018
- > 30 issues resolved in 8 ballots
- > 100 issues open
- v1.2, not 2.0:
 - “A Revision Task Force produces new, **minor revisions** to existing, formally published specifications.
 - “A RTF may make **minor technical changes**, but keep in mind that, in general, significant technical changes will require a new RFP.”
 - *The OMG Hitchhiker’s Guide, V7.8*

Catch-up: DMN 1.1

- New features
 - Decision services: notation, metamodel & execution semantics [11-45, 11-176]
 - Artifacts: Text annotations & Associations [11-99]
 - Extension capability [11-155]
 - Imported values for LiteralExpressions [11-73]
 - Simple expression added to S-FEEL to allow comparisons in DT cells [11-21]
 - Numerics allowed to be negative [11-13]
- Removed features
 - Decision tables lose completeness and consistency markers [11-32, 11-44]

Agreed for DMN 1.2

- New features
 - Annotation columns in decision tables [12-124]

| Table name | | | | | | |
|------------|--------------------|--------------------|---------------|---------------|--------------|--------------|
| Hit policy | Input expression 1 | Input expression 2 | Output name | | Annotations | |
| | Input values | Input values | Output 1 | Output 2 | Annotation 1 | Annotation 2 |
| | Input values | Input values | Output values | Output values | | |
| Rule id 1 | | | | | | |
| Rule id 2 | | | | | | |
| Rule id 3 | | | | | | |
| Rule id 4 | | | | | | |
| Rule id 5 | | | | | | |

Agreed for DMN 1.2

- New features
 - Annotation columns in decision tables [12-124]
- Removed features
 - Clarity on use of names:
 - Only element names are displayed, not (e.g.) labels [12-89]
 - Restrictions on use of names vs ids, namespaces, etc [12-94]
- Changes
 - Minor changes to semantics of arithmetic and list functions [12-24, 12-74, 12-78]
 - QNames specified; typeRefs are strings not Qnames [12-94]
 - Bug-fixes & tidy-ups [e.g. 12-55]

Where we're going

Where we're going

- Exciting things to come in v1.2:
 - Diagram interchange [12-20]
 - Context-free grammar [12-42]
 - Invocable decision services [12-10]

Diagram interchange, using OMG DI

(from Denis Gagné)

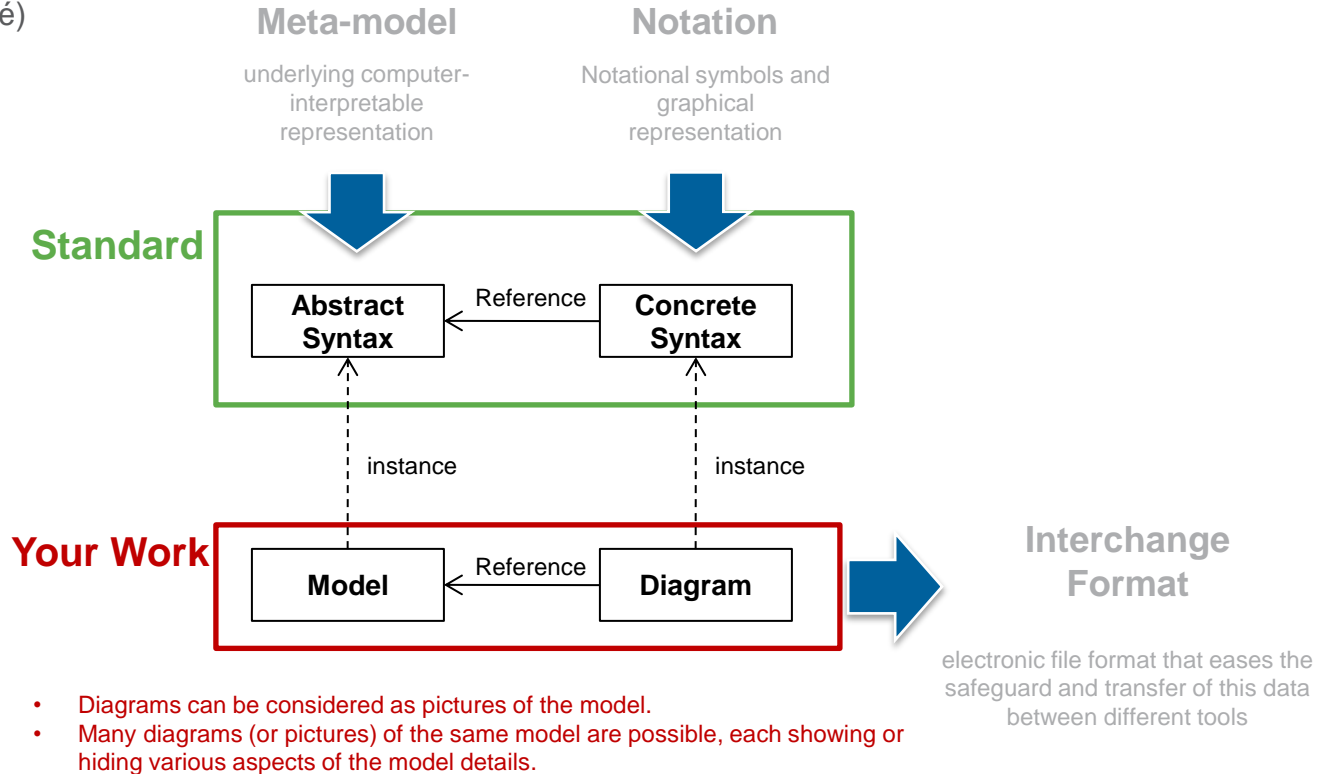

Diagram interchange, using OMG DI

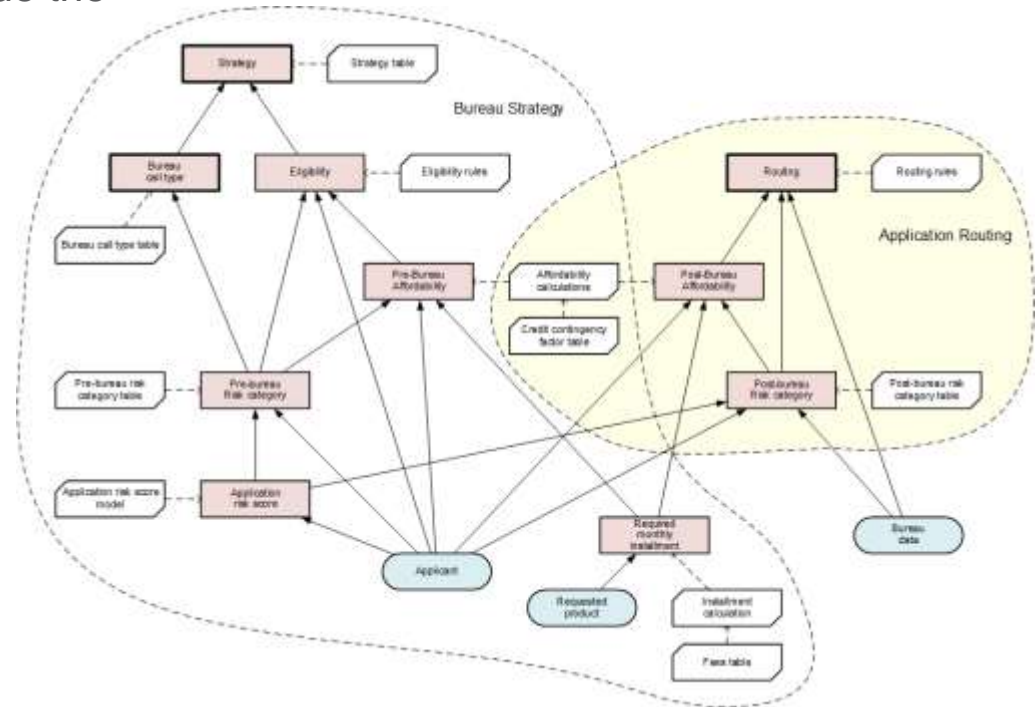

- OMG DI requires all semantic elements to have IDs
- Hence changes already agreed:
 - Ids for context entries [12-134]
 - InformationRequirement, KnowledgeRequirement and AuthorityRequirement inherit from DMNElement, therefore have ids [12-101]

Context-free grammar

- Under discussion; current proposal is:
 - FEEL grammar to require single quotes around names that contain spaces or operators
 - 'Alan Fish'
 - 'disposable income'
 - 'Profit and loss'
 - Names without spaces or operators MAY still be written without single quotes
 - AlanFish
 - disposableIncome
 - ProfitAndLoss
 - Single quotes in names MUST be escaped with a second single quote
 - 'Alan Fish''s disposable income'
 - A compound name may not start or end with a space. It may contain spaces but not 2 consecutive spaces or other whitespace characters

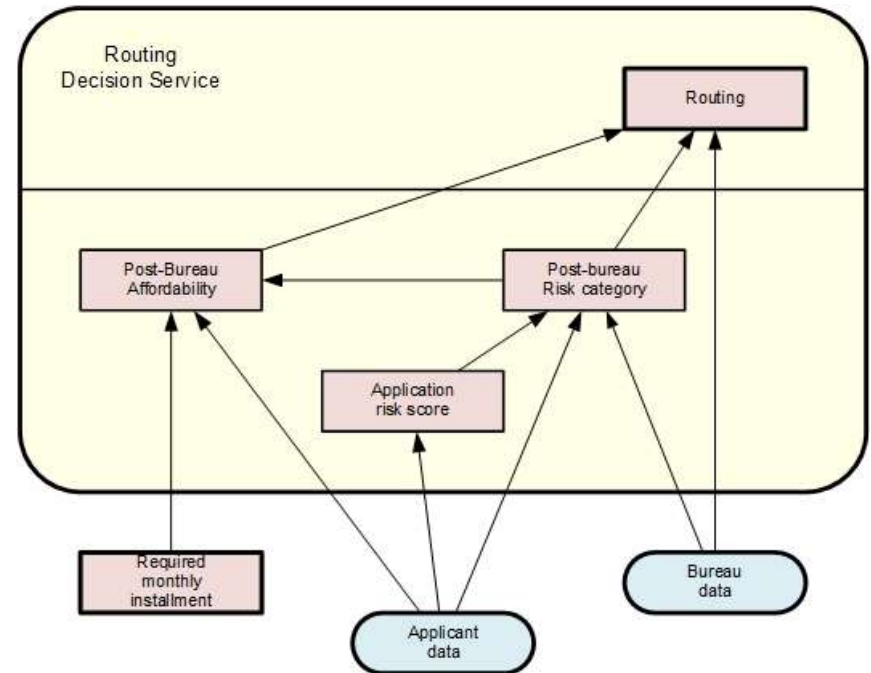

Decision services, reuse & composability

- DMN 1.1:
 - decisions to be called from outside the model using decision services

Decision services, reuse & composability

- DMN 1.1:
 - decisions to be called from outside the model using decision services
 - DS defined as overlay on DRD
 - Input data and input decisions become DS parameters
 - Output decisions become DS returned results

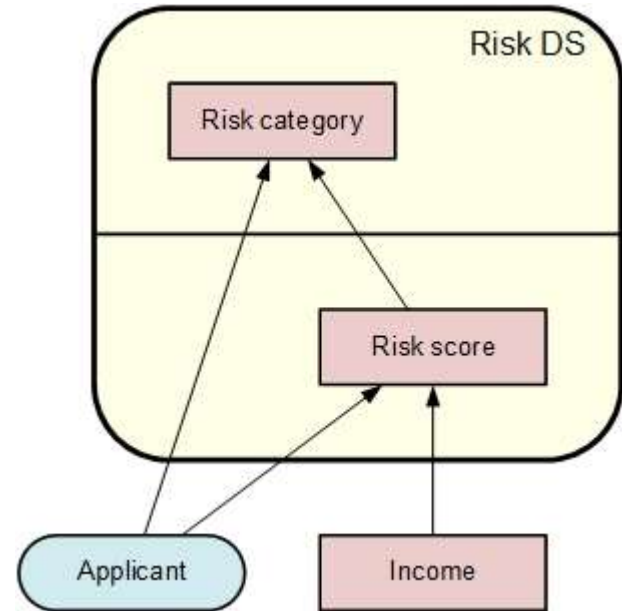

Decision services, reuse & composability

- DMN 1.2:
 - DS & BKM become types of “invocable thing”

Decision services, reuse & composability

- DMN 1.2:
 - DS & BKM become types of “invocable thing”
 - DS defined as an overlay, as before
 - input data & input decisions become parameters
 - output decisions become DS results

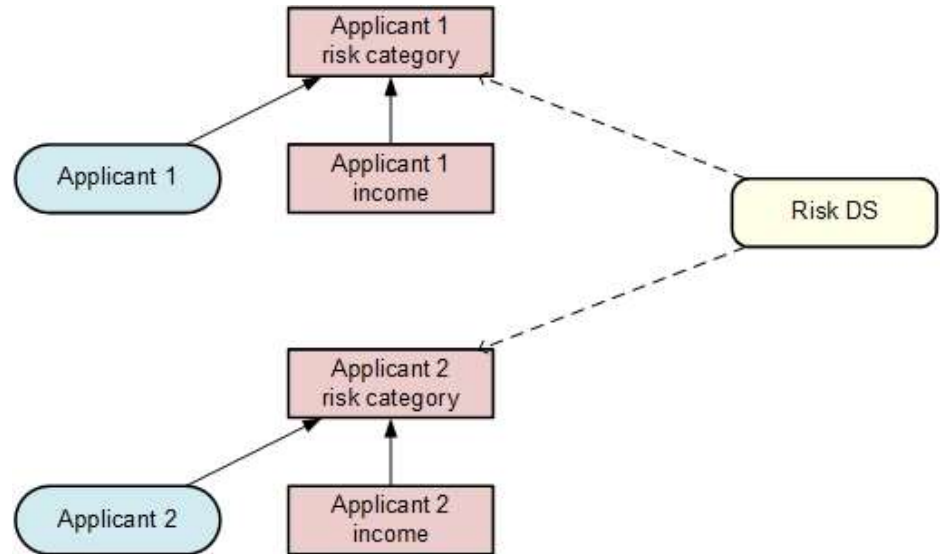

Decision services, reuse & composability

- DMN 1.2:
 - DS & BKM become types of “invocable thing”
 - DS defined as an overlay, as before
 - DS may be invoked by decision
 - parameter values provided by calling decision
 - e.g. from its required ID & decisions

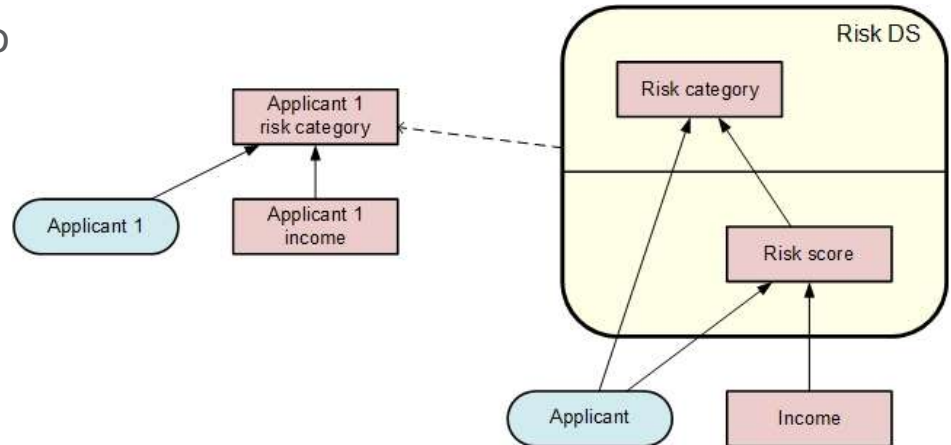

Decision services, reuse & composability

- DMN 1.2:
 - DS & BKM become types of “invocable thing”
 - DS defined as an overlay, as before
 - DS may be invoked by decision
 - Reuse now possible within DRD

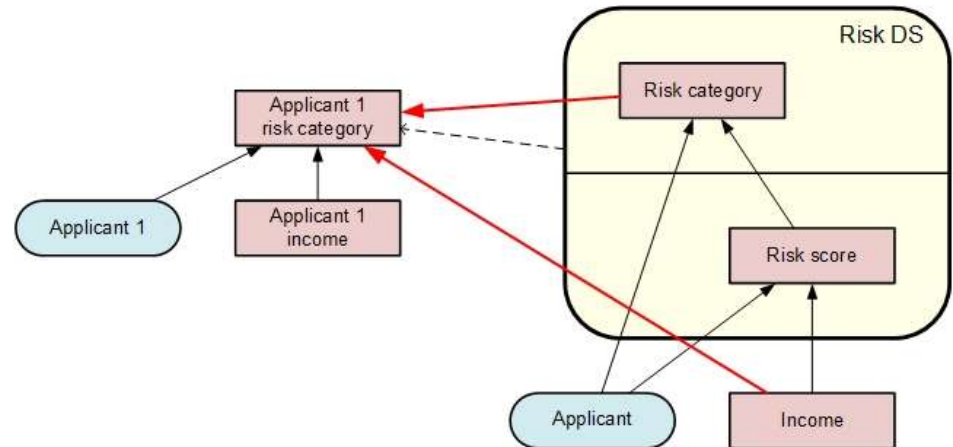

Decision services, reuse & composability

- DMN 1.2:
 - DS & BKM become types of “invocable thing”
 - DS defined as an overlay, as before
 - DS may now be invoked by decision
 - Reuse now possible within DRD
 - Possible to draw invoked DS closed or open
 - e.g. opened “in place” to combine DS invocation and DS definition
 - but this raises interesting issues...

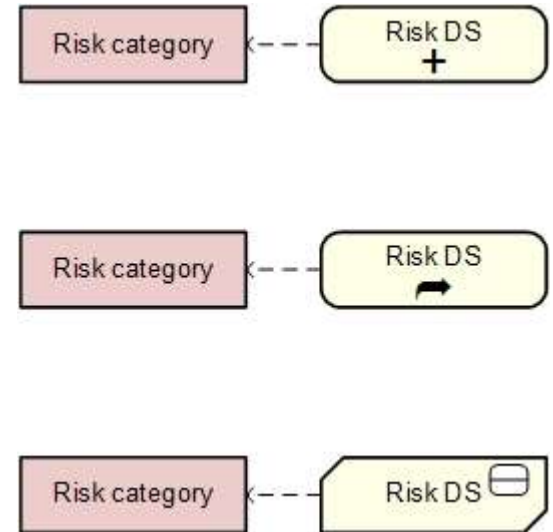

Decision services, reuse & composability

- Still under discussion:
 - Should there be constraints on connections between elements in DS definitions and other elements in DRG?
 - Should we distinguish between “opened” DS and DS “definitions”?

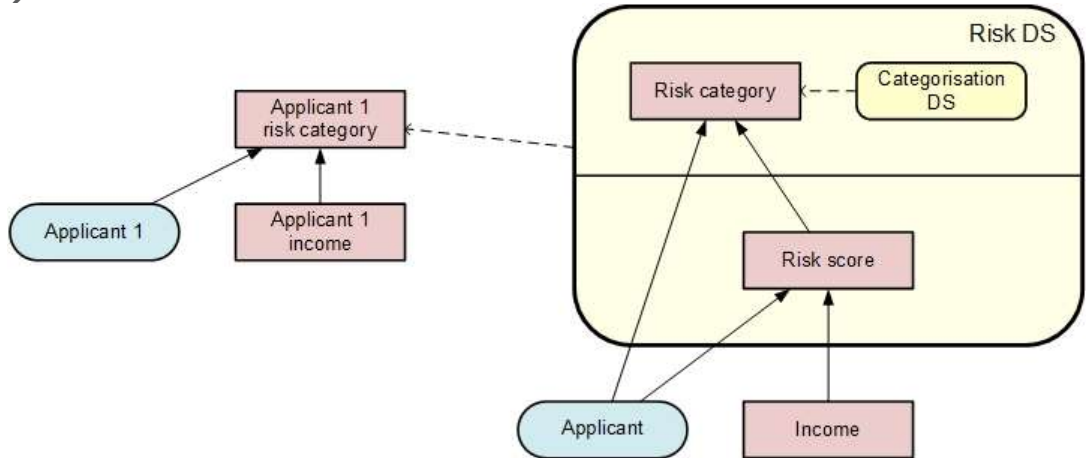

Decision services, reuse & composability

- Still under discussion:
 - Should there be constraints on connections between elements in DS definitions and other elements in DRG?
 - Should we distinguish between “opened” DS and DS “definitions”?
 - How are “closed” DSs notated?

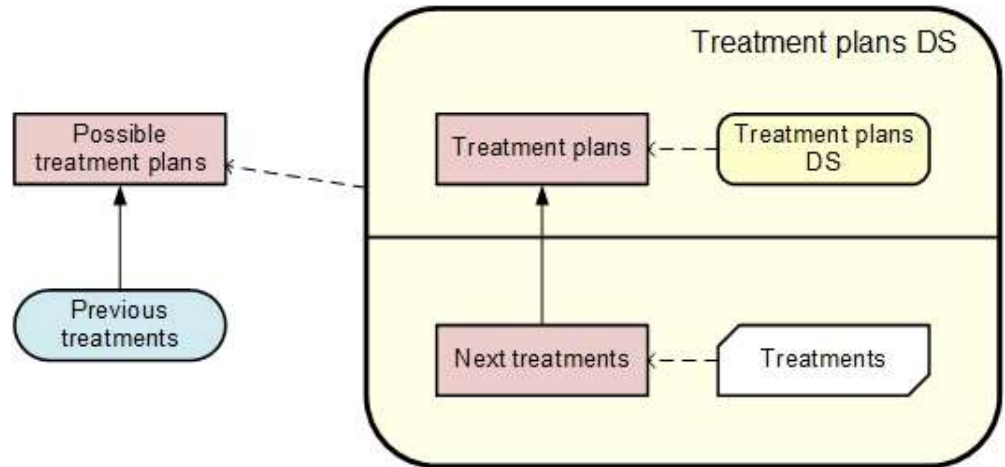

Decision services, reuse & composability

- Still under discussion:
 - Should there be constraints on connections between elements in DS definitions and other elements in DRG?
 - Should we distinguish between “opened” DS and DS “definitions”?
 - How are “closed” DSs notated?
 - What are the implications of composition?

Decision services, reuse & composability

- Still under discussion:
 - Should there be constraints on connections between elements in DS definitions and other elements in DRG?
 - Should we distinguish between “opened” DS and DS “definitions”?
 - How are “closed” DSs notated?
 - What are the implications of composition?
 - Should we allow recursion?

How to get involved

How to get involved

- Review existing open issues
 - <http://issues.omg.org/issues/lists/dmn-rtf>
- Report a new bug or issue
 - http://www.omg.org/report_issue.htm
- Contribute to discussion tomorrow
 - “What you Like and What you Do Not Like in DMN”

The screenshot shows the 'Bug Issue Reporting Form' on the OMG website. At the top, there is a navigation bar with links for 'About Us', 'Press Room', 'Contact', 'Partners', 'Services & Tools', 'Technology', 'Education', and 'Programs'. The main heading is 'Bug Issue Reporting Form'. Below the heading is a paragraph of text: 'All OMG specifications are subject to continuous review and improvement. As part of this process, we encourage readers to report any ambiguities, inconsistencies or inaccuracies they may find in our specifications. Please use this form to submit a report to OMG about the problem you have found, being as precise as possible. If the problem is threatening you from implementing software based on the specification, please note that in the description and flag the severity as 'critical'. If you would like to propose a solution to the problem, please include that in your description as well. Thanks for helping us provide the highest possible quality in our specifications.'

Below the text is a section titled 'About You' with a form for 'Your Name', 'Employed (yes/no)', and 'Email'. This is followed by an 'Intellectual Property Right Agreement' section with a paragraph of text and a 'By clicking "I agree" above you:' section with a list of three terms. Below that is an 'About The Specification:' section with a form for 'Specification Name', 'OMG Document number', 'Revision Date', 'Chapter Section', 'Version number', and 'Page number(s)'. This is followed by an 'Issue Being Reported:' section with a form for 'Very short, one line description (max. 10 words)', 'Nature of Issue', and 'Severity of Issue'. Finally, there is a 'Full Description Of The Issue:' section with a large text area.

Thank You

Dr Alan N Fish
